

IN THE CLAIMS

Please amend the claims as follows:

1. (Previously Presented) A tilting organizer comprising
a base section for mounting to a surface, wherein said base section includes a sidewall having a groove formed therein;
a supply section having a plurality of compartments to store articles, wherein said supply section includes a plurality of walls forming the compartments and an arm protruding from an exterior wall aligned with the sidewall having the groove, wherein the arm and the groove engage to movably connect said base section and said supply section, wherein the arm has protrusions extending from an outer edge, and wherein said supply section can be extended out from said base section and then rotated to provide access to the plurality of compartments.
2. (Original) The tilting organizer of claim 1, wherein neither said base section nor said supply section has any movable parts.
3. (Original) The tilting organizer of claim 1, wherein said base section and said supply section are each a single unit.
- 4-5. (Canceled)
6. (Original) The tilting organizer of claim 1, wherein opening to the compartments is on top of said supply section, and said supply section rotates downward once extended out from the base section.
7. (Original) The tilting organizer of claim 1, wherein said supply section can extend out of base section forward and backward.
8. (Original) The tilting organizer of claim 1, wherein the compartments are formed

in some combination of top, front and side of said supply section.

9. (Original) The tilting organizer of claim 1, wherein said supply section can rotate upward or downward.
10. (Original) The tilting organizer of claim 1, wherein said base section and said supply section are made of a rigid material.
11. (Previously Presented) The tilting organizer of claim 10, wherein the rigid material is a plastic.
12. (Previously Presented) The tilting organizer of claim 1, wherein said supply section can rotate at different angles.
13. (Original) The tilting organizer of claim 5, wherein the groove is formed through the sidewall.
14. (Original) The tilting organizer of claim 5, wherein the groove is formed in an inner surface of the sidewall.
15. (Original) The tilting organizer of claim 5, wherein the arm is a rod.
- 16-21. (Canceled)
22. (Original) A tilting organizer comprising:
a base including at least a bottom and a side, wherein the side has a groove formed therein, the groove extending vertically downward from an upper edge to a stationary point, the groove extending horizontally forward from the stationary point and then extending diagonally up and forward, the groove ending at a tilting point at end of portion extending diagonally up and forward; and

an organizer having a plurality of compartments formed therein, wherein the organizer has an arm formed in a side thereof, the arm capable of engaging the groove and moving within the groove in order movably engage said base and said organizer.

23. (Original) The tilting organizer of claim 22, wherein when the arm is located at the stationary point said organizer is within said base.

24. (Original) The tilting organizer of claim 22, wherein when the arm is located at the tilting point said organizer is extended out from said base and is tilted downward to provide access to the compartments.

25-32. (Canceled)
